

THIS JOB ADVERTISEMENT HAS BEEN POSTED BY A RECRUITMENT FIRM. THE POSITION IS WITH RJS ASSOCIATES, INC.'S CLIENT

Our client delivers solutions to both government and commercial clients leveraging technical talents across the company and utilizes science-based approaches to address our nation's most complex environmental problems.

This division of our client specializes in a science-based approach to protect and manage environmental resources;

- *Particularly those related to the coastal, marine, and freshwater environment.*
- *Such as assessment of estuarine, coastal, and/or marine ecosystems, with a particular emphasis on ecosystems*

Technical areas of interest include ecosystem monitoring and assessment, field investigations, data analysis and interpretation, risk assessment, and technical report writing.

My client has a successful and proven track record of developing, evaluating, and applying innovative methods and technologies for detecting, quantifying, and characterizing changes in the environment, including research and development activities for assessing risks to human health or the environment from natural or man-made contaminants and incidents.

The successful candidate should also have a proven track record of working with Federal, state and local environmental clients in the Southeastern United States, and will have responsibility for establishing and maintaining client relationships.
